QUARTERLY FLAX MARKET REVIEW

Reserve U. S. FLAXSEED CRUSHINGS WELL ABOVE OTHER RECENT YEARS AUG 23 1944 *

With continued brisk demand for linseed oil, flaxseed crushings in the United States during the third quarter of the 1940-41 crop year were almost 50 percent larger than the corresponding three months last season and well above other recent years, according to the Federal-State Market News Service. Crushings January through March amounted to 10,228,000 bushels, bringing the season's total since July 1st up to 27,254,000 bushels. This compares with 23,442,000 bushels during July through March last season and 19,361,000 bushels two years back.

Crushings again were largely of domestic flaxseed. Imports increased moderately compared with earlier in the season but were well below the similar quarter in other recent years. Imports placed at 3,990,000 bushels brought the season's total since July 1st up to 7,863,000 bushels or about 2,200,000 bushels less than July through March last year and about 6,500,000 bushels less than two years back.

Reflecting the increased crushings and reduced imports of foreign seed, the near-record supplies of domestic flaxseed this season have disappeared at the most rapid rate in recent years. Supplies of flaxseed remaining at April 1st were placed at 13,793,000 bushels or almost twice those of a year ago. However, a comparison of April 1st stocks with total supplies of 35,038,000 bushels at the beginning of the season points to a disappearance of 21,245,000 bushels during July through March. This compares with 15,282,000 bushels during the corresponding nine months last year and 6,349,000 bushels two years back.

Movement of linseed oil continued relatively heavy during the third quarter and was placed at 157,266,000 pounds. Exports remained light and totaled only 1,347,000 pounds but factory consumption increased to 106,787,000 pounds and other domestic disappearance was the largest in recent years and totaled 49,132,000 pounds. Distribution during the third quarter brought the total for the first nine months of the 1940-41 crop year up to 463,911,000 pounds or about 56,000,000 more than the corresponding three quarters last season and about 103,000,000 pounds more than during July, 1938 through March, 1939.
